

Annotational issues:

Mutual manufacturers do have a complete other sorting-order or Annotation to catalog their products. In order to keep track of the enormous amount of products/types/product-numbers, the major/primary identification of the CALCUSEUM-database does skip most Non-Alphanumeric Tokens/Chars (like -, =, .), but also spaces.

Examples:

Calculator CASIO model 101-A is cataloged as **CASIO: 101A**

Calculator OLYMPIA CP 140 is cataloged as **OLYMPIA: CP140**

Instructions SHARP 7M0.5T(TINSM3832CCZZ) is cataloged as **SHARP_docu: 7M05TTINSM3832CCZZ**

Nixie-tube part RODAN GR-111Pa is cataloged as **RODAN_parts(E): GR111Pa**

PCB (Printed Circuit Board) CASIO 12H-12(C) is cataloged as **CASIO_parts(E): 12H12C**

Exceptions:

When the removal of the special character(s) results in a confusing syntax, for example:

PRIVILEG: LC10-8M remains **PRIVILEG: LC10-8M** (**PRIVILEG: LC108M** would lead to a wrong conception).

AKA (**Also Known As**):

In addition, each Item in the Database is also identified by its AKA (notification somewhere on the item, usually the front) AND... its AKA Label (notification on the label of the item, usually on the back).

Examples:

Front
AKA = personal-mini

Label on back
AKA Label = personal-mini, CM-607
Primary Database-notation = **CASIO: CM607**
